Alex,

Once our sampling plan is approved EPA contractors will be able to do split samples. That said I think having a State agency involved is very important for the communities confidence in the remedy.

Thanks,

Chuck

Chris – As EPA will not be collecting split samples, I would like to take the opportunity to collect some splits on the 21st and 22nd. I don't have a well preference except to do some of the old and some of the newer wells.

Alex

EXTERNAL:

Sorry for the late notice, but we do have a sampling modification. We have been attempting to reschedule the soil vapor and groundwater sampling so that we don't compromise the ambient air sampling program. We now have confirmation that the soil vapor and groundwater sampling teams can both conduct the sampling on December 21, 22, and 23. This will allow the ambient air sampling to conclude prior to opening up direct conduits to contaminated groundwater and soil vapor.

Please confirm Curtis' availability for split sampling on 12/21 and 12/22. Also, if you have specific wells you would like to split, we can likely coordinate those samples to occur such that Curtis' isn't waiting for wells to be sampled.

Thanks! I do have the PRB monitoring wells on the attached map. It is not final yet, because we still need to change the orange soil vapor dots to green soil vapor sample locations and give them the correct location ids; however, for the groundwater monitoring wells, this is correct. I will send out final version when we have it.

Hi Chris, no we will not be collecting splits for this sampling event. We plan on having someone on site next week monitoring the groundwater sampling event. Do you have a map showing the new locations of the wells for the PRB? Stan

Hi Chuck – Will EPA be collecting split samples during the ambient air sampling event? If so, please have your consultant reach out to me today for access and coordination during tomorrow's deployment. Thanks, Chris

Subject: Area 40 Sampling

Hi Chuck and Stan – Per the Agency technical meeting last week, we are developing the schedule for Area 40 groundwater, soil vapor, and ambient air sampling. Per the sampling plan, there are the following samples:

Ambient Air = 15 locations (see black locations on attached)

Soil vapor wells = 8 locations (see green and orange locations on the attached)

Groundwater wells = between 20-30 wells (to be sent next week)

We intend on beginning ambient air sampling on December 7, 2020. I wanted to give you as much heads up as possible on the ambient air sampling because you will need to obtain the Radiellos. The Radiello sampling devices are placed in the protective covers that our consultant will bring on the first day. The devices are left out for 14 consecutive days and retrieved on the 14th day. We have a met station on-site which will be used during the analysis of the data.

Soil vapor and groundwater sampling will only take 2 days and will likely be done the week of December 14, however, I will confirm dates as soon as we have them finalized. We are surveying the new wells this week and should be able to send the map with all the sampling locations next week.

Have a Happy Thanksgiving! Chris

We will be sampling ambient air

Christopher M. Fennessy, P.E.
